FileSafe User Manual

Table of Contents:

1. Introduction:

FileSafe is a file encryption software designed to secure your sensitive data by encrypting files on your computer. With FileSafe, you can encrypt individual files using strong cryptographic algorithms, ensuring that only authorized users can access the encrypted content.

2. System Requirements:

- Operating System: Windows, macOS, Linux

- Python 3.x installed

- Required Python packages (specified in `requirements.txt`)

- Minimum screen resolution: 1024x768

3. Installation:

1. Download the FileSafe source code from [GitHub repository](https://github.com/your_repository).

2. Extract the downloaded zip file to a location of your choice.

3. Open a terminal or command prompt.

4. Navigate to the extracted folder.

5. Install the required Python packages by running:

```
pip install -r requirements.txt
```

4. Getting Started:

1. Navigate to the `dist` folder within the FileSafe directory.

2. Locate the `main.exe` file.

3. Double-click on `main.exe` to launch the FileSafe application.

4. Follow the on-screen instructions to create or enter your password.

Alternatively:

1. Open a terminal or command prompt.

2. Navigate to the folder where you extracted the FileSafe source code.

3. Run the `main.py` file using Python:

```
python main.py
```

4. Follow the on-screen instructions to create or enter your password.

5. Encrypting Files:

1. Click on the "Select File" button to choose the file you want to encrypt.

2. Once the file is selected, click on the "Encrypt File" button.

3. Enter your password when prompted.

4. The file will be encrypted, and a copy will be saved in the vault.

6. Decrypting Files:

1. Select the encrypted file from the list of encrypted files.

2. Click on the "Decrypt File" button.

3. Enter your password when prompted.

4. The file will be decrypted and saved to its original location.

7. Managing Encrypted Files:

- Use the list of encrypted files to view all files that have been encrypted.

- You can delete an encrypted file from the list by selecting it and clicking on the "Delete" button.

- Use the "Refresh" button to update the list of encrypted files.

8. Troubleshooting:

- If you forget your password, there is no way to recover it. You will need to create a new password, which will delete all previously encrypted files.

- Ensure that you have the necessary permissions to read and write files in the selected directories.

9. Support and Feedback:

For support or feedback, please contact our support team at support@filesafe.com. We value your input and are committed to improving FileSafe based on user feedback.

Thank you for using FileSafe!
